# CGMHS Capital Budget Justification

---

## CT

Our current 2nd generation CT Scanner is obsolete.

We have a 4-slice scanner; 16-slice scanners are considered "minimal requirements" for many high resolution studies.

Scanners in our market range from 16-slice to 256-slice, with 64-slice considered market standard.

"Slice" refers to the amount of diagnostic information the scanner is able to collect with one rotation of the machine; the higher the slice, the more diagnostic information gathered at one time with better resolution (similar to the # of pixels in a digital camera)

Specialty clinics (urology, oncology, surgery) rely heavily on high resolution CT scans in treatment planning.

## Mammography

Less than ten facilities in Alabama still perform analog film-screen mammography.

Digital mammography allows for higher throughput, reduced supply cost, digital storage and interpretation, and improved quality in imaging of dense breast tissue.

# CGMHS Capital Budget Justification

---

## **Fluoroscopy X-Ray Unit**

Fluoroscopy is an imaging technique that uses x-rays to obtain real-time moving images. The current fluoroscopy x-ray unit was purchased in 1989 and is beginning to have service issues. New fluoroscopy equipment on the market today delivers measurably less radiation to patients than does older model equipment.

## **UltraSound Unit**

Current UltraSound Unit went out in early September. Due to the age of the equipment and cost of repair the prudent financial decision is to purchase a new machine.
